

PREMIUM SURFACE FOR PP-PRINTING PERFECTION

Premium P-Surface 141 for your 3D-printer

-  Optimal adhesion for PP printing
-  Easy handling with firmly bonded metal plate
-  Minimizes warping in 3D prints
-  Smooth part release

The Premium P-Surface 141 is available for industry-leading printers such as Prusa MK3 & MK4, Prusa XL, Raise 3D Pro2 & Pro3, FLSUN V400, WASP Delta 4070 FX, and more. It ensures optimal performance and straightforward handling for all users.

Need a custom solution?

We provide individualized P-Surface 141 solutions that ensure a precise fit for your printer and a high-quality PP printing experience. Contact us for more information.

Perfect fit for every form factor.

THE SOLUTION FOR RELIABLE 3D PRINTING OF POLYPROPYLENE.

The **P-surface 141** 3D printing build surface ensures strong adhesion during 3D printing of polypropylene. At the same time it enables easy removal of the printed parts after completion at elevated print bed temperatures. Although it is optimized for **P-filament 721** and **P-filament carbon 411**, it can be used with PLA, ABS, PETG, PA12, and other filaments.

Conventional solutions with adhesives

✓	Easy to use and easy to remove printed parts
✗	Glue sticks, tapes, sprays, etc. required
✗	Reapplication for each print required
✗	Expensive on the long run
✗	Safety issues by using glues and sprays
✗	Limited suitability for industrial use

P-surface 141 / Premium P-surface 141

✓	Easy installation and removal of printed parts
✓	Direct 3D printing on the surface
✓	Very durable, repeatedly usable*
✓	Very good price performance ratio
✓	Ensures safe working
✓	Perfectly suited for industrial use

* If **P-surface 141** becomes dirty over time and the adhesion to the printed part or to the printer bed decreases, **P-surface 141** can be cleaned by using **Bio P-activator 208** and **Bio P-cleaner 308**.
